Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: the closest prior art of record, i.e. Liu, U.S.P. No. 5,684,909 teaches (Figs.1-5c) a large effective area single mode optical fiber with four adjacent core or cladding segments 26,28,30,32 segments of a specific refractive index profile designed for low loss/zero dispersion of optical signals over a wavelength range of 1450nm to 1580nm and an effective area greater than 60 microns (2).

Neither Lui 909' or any of the other cited references of record teaches or suggests the claimed single mode optical fiber comprising a core glass region including first and second annular segments of a specific refractive index profile surrounded by a clad with the specific ranges for refractive index profiles, inner/outer profile volume, effective area, total dispersion, shape of refractive index profile, cable cutoff wavelength, mode field diameter, dispersion, attenuation and (alpha) refractive index profiles (See claims 1-36 for the specific numbers and ranges of the aforementioned parameters.) which are considered to be patentable over the teachings of Lui 909' and all of the cited prior art of record. The remaining references cited on the attached form PTO-892 are cited as background art only.

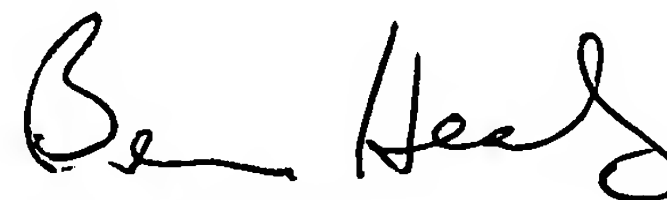

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian M. Healy whose telephone number is (571)272-2347. The examiner can normally be reached on Compressed Schedule Tues-Thurs. 7AM-4:30PM.
